

Known bugs

Title	Helper's chat color not updated when they join the request
Environment	Android emulator
Steps to reproduce	1. User sends help request -> becomes the rescuee (can be any problem type). 2. Someone accepts the help request and is visible as helper on the map. 3. Messages are sent in the chat, so interactive messaging is started.
Expected result	Helpers' chat color is updated to its right color; first helper green, second blue and third brown.
Actual result	Sometimes the color of the helper is gray, indicating inactivity – even when this is not the case.
Other information	

Title	Helper's chat icon does not disappear from chat room when they leave
Environment	Android emulator
Steps to reproduce	1. User sends help request -> becomes the rescuee (can be any problem type). 2. Someone accepts the help request and is visible as helper on the map. 3. Messages are sent in the chat, so interactive messaging is started. 4. Helper stops providing help by exiting the helper state (notification to rescuee is shown). 5. Rescuee closes the chat and opens it/keeps it open.
Expected result	At step 4, the helper-icon is not visible anymore. Only rescuee's own red icon is visible on the top-left corner (if no other helpers active). If other helpers are still active, their icons don't disappear.
Actual result	Helper's icon is still visible, even after they have left the helper-state.
Other information	

Title	Find my location button and ruler being multiplied on idling
Environment	Web view
Steps to reproduce	1. Open web application from Snowledge (lumisovellus.fi) 2. Leave the page idle for a while (about 10 to 15 minutes). Switching to another tab on browser is alright. 3. Come back to Snowledge tab and check on the map view
Expected result	The map view should work normally with only one instance of "Find my location" button and distance ruler.
Actual result	The location button and distance ruler are multiplied many times and aligned vertically along the right side of the map.
Other information	

UI/UX improvements

Title	Change of map icons to same icons as in chat
Environment	Android emulator
Expected result	The location of helper and rescuee should have cohesive icons, that match the chat icons (same color backgrounds and white user silhouette). For example, helper is green in chat and should also be this in the map view. This makes it faster and more intuitive to differentiate every user on the map.
Actual result	Now the map icons have shapes with text, for example in rescuee's side, helper is gray box with black text "help provider". These texts are small and can be hard to read. Simple icons rely more on matching visual cues, not on eyesight.
Other information	Icons should match every user's own color: rescuee = red, first helper = green, second helper = blue and third helper = brown. Textual info as tooltips – when icon is pressed, it shows text "Helper" or "Rescuee".

Title	Addition of helper count to helper's view
Environment	Android emulator
Expected result	The number of other helpers should be visible to the helpers. Now only the rescuee is able to swiftly see how many helpers are active. This way, the user doesn't have to count them themselves/open chat to see changes.
Actual result	The number of other helpers is visible only in the chat and on the map itself (if helpers are close enough to be seen easily).
Other information	

Title	Chat should have Finnish translations, when the chosen language is Finnish
Environment	Android emulator
Expected result	Every textual part in the chat dialog is in Finnish, when the user has changed their language settings to Finnish. For example; "Close"-button is "Sulje", "Helper" is "Avuntarjoaja" & "enter message" is "lähetä viesti".
Actual result	Chat is fully in English, outside of the messages that users write themselves.
Other information	Ensures that people who don't know English that well, can fully function in the need of rescue. Thus, it is an accessibility issue.

Title	Notification in the rescuee's chat, when helper has left the helping state
Environment	Android emulator

Expected result	Notification of left helper, that stays in chat. Could be e.g., in gray color to indicate that it is not a real message from any user, text: "Helper has left the helping state" etc. This prevents trying to message further, if quick screen informing about left user was missed.
Actual result	When the helper leaves, a popup screen is shown to the rescuee. No further information is to be seen on the application after the popup is closed. Helper count reduces, but when in chat, this could be also missed.
Other information	Bigger issue combined with the helper icon not disappearing after leaving helping state. If the helper icon disappears, it is easier to notice the leaving of a helper even without separate notification. Still, it could be a possible addition to make rescue function feel more informal e.g., for older users.

Title	Aligning rescuee icon with the chat
Environment	Android emulator
Expected result	Standard UI aspect of chatrooms is typically to have the user aligned with chat messages. This would mean that the rescuee's own icon is located in the upper right corner, under the close button. This way the chat is visually clearer to understand.
Actual result	Rescuee-icon is always located on the upper left corner, even when their messages are on the right side.
Other information	More of an aesthetic change, thus not critical.
